Investment Material
and Sandblasting

High Vest

Phosphate investment

Universal phosphate investment for all types of alloys used in fixed prosthetics and for injected ceramics

Features and benefits:

Graphite-free.

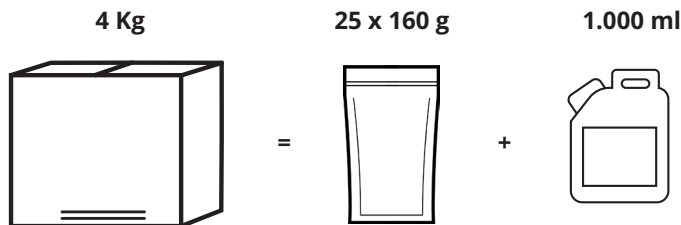

30 minutes of curing.

It can be used with both rapid heating or conventional techniques.

Fine, creamy consistency that provides castings with very smooth surfaces, ensuring a perfect fit.

Working time: approximately 5 minutes.

Glass beads

Lead-free sodium microspheres

Features and benefits:

Specially designed for cleaning and finishing metal surfaces without deforming them.

Suitable for removing the coating in metal-free ceramic techniques.

4,5 Kg

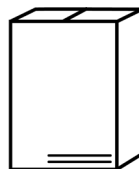

Aluminium oxide

Features and benefits:

Aluminium oxide is used as an abrasive for sandblasting, to improve the adhesion of restorations and in the polishing of materials.

A controlled crystallisation alumina (the hardest after diamond), with high purity (99.60% Al_2O_3), obtained through a strict washing process. Available in 50 / 100 / 150 / 250 microns."
